GENERAL OVERVIEW OF CURRENT TRANSFORMERS

CURRENT TRANSFORMER is used for measurement of electric alternating currents. When current in a circuit (primary current) is too high to directly apply to measuring instruments, a current transformer produces a reduced current (secondary current) accurately proportional to the current in the circuit, which can be conveniently connected to measuring and recording instruments. A current transformer also isolates the measuring instruments from what may be very high voltage in the monitored circuit. Relationship between primary and secondary currents is called **rated transformation ratio**.

$$I_1 = I_2 \cdot \frac{N_2}{N_1}$$

where: I_1 - primary current, I_2 - secondary current, N_1 - number of turns of primary winding, N_2 - number of turns of secondary winding, N_2/N_1 - rated transformation ratio
Current transformers are used mainly in such a way that the cable from the measured shock or bus current passes through the main hole transformer, which is equivalent to one coil primary winding. In this case, the above equation simplifies to:

$$I_1 = I_2 \cdot N_2$$

The task is to reduce the transformer output current for currents of over 120% of measurement range, to protect against destruction of measuring devices connected to the transformer in case of surges or failures in the primary circuit.

FEATURES:

- Wide range of accuracy classes: 0.2S, 0.2, 0.5S, 0.5, 1; 3
- Wide range of supported primary currents, the dimensions of rails, the length of casing and hole diameters.
- Multiple mounting methods, including wall mounting, DIN rail 35mm, the conductor, a current bar.
- Shields designed to seal connections.

DEMAND FOR POWER MEASURING DEVICES:

CT users expect these devices fulfill two basic conditions:

- a high degree of accuracy in the nominal current,
- security functions with overloads.

In order to fulfill these stipulations it is necessary for the power of a current transformer offered to fully achieve the actual power requirements of the measurement setup. In ascertaining the actual power requirements, consideration is to be made not only of the loss of power of the appliances to be connected up, but also the losses incurred by the instrument leads.

GENERAL OVERVIEW OF CURRENT TRANSFORMERS

Power requirements for measuring apparatur and relays:

- Analog moving-iron meters 0.7 – 1.5 VA
- Rectifier current meters 0.001 – 0.250 VA
- Multi-range current meters 0.005 – 5.000 VA
- Current recorders 0.300-9.000 VA
- Bimetallic ammeters 2.5 – 3.0 VA
- Power meter 0.2 – 5.0 VA
- Power factor meter 2.0 – 6.0 VA
- Meters 0.4 – 1.0 VA
- Relays 0.2 – 6.0 VA
- Power transducers 0.5 VA
- Energy meters 2.5 VA

Internal losses of copper wiring:

$$P = \frac{I^2 \times 2 L}{q_{CU} \times 56} \text{ [VA]}$$

Where:

I – Secondary nominal current,
L – Distance in [m],
q_{CU} – wire cross-section in [mm²].

LU01 - SUMMATION CURRENT TRANSFORMERS

SUMMATION CURRENT TRANSFORMER are designed to summarize several synchronous alternating currents of equal phase relation with any angle of phase difference. They are used to add secondary currents of several main c.t.'s in order to measure with the CT only.

AN EXAMPLE OF POWER SELECTION FOR MAIN TRANSFORMERS WITH DIFFERENT TRANSMISSIONS

Main Transformer ratio:

$$\begin{array}{r} 500/5A \\ 400/5A \\ 300/5A \\ \hline \text{Total current} = 1200/5A \end{array}$$

Burden - 1 Ammeter

Required Active performance of the Current Transformer:

Ammeter	1.5 VA
Measurement Conductor Loss	1.5 VA
Consumption in Summation CT	4.0 VA
Total VA	7.0 VA

The individual main transformer must provide it's VA share from this 7.0 VA.

1. Main transformer 500/ 5A $(500/ 1200) \times 7 = 2.92 \text{ VA} + \text{additional losses} \approx 3.75 \text{ VA}^*$
2. Main transformer 400/ 5A $(400/ 1200) \times 7 = 2.33 \text{ VA} + \text{additional losses} \approx 2.5 \text{ VA}^*$
3. Main transformer 300/ 5A $(300/ 1200) \times 7 = 1.75 \text{ VA} + \text{additional losses} \approx 2.5 \text{ VA}^*$

* The VA values of the main transformer are to be rounded up to the corresponding values in our chart.

Note: If using unequal main c.t.'s than ration of lowest primary main c.t. current to the highest one should not exceed 1:8.

FEATURES:

- Available current transformers versions with 2 to 8 primary windings.
- Nickel plated secondary terminals with +/- screws.
- Multiple mounting methods, including wall mounting, DIN rail 35mm.
- Terminal protection IP10.
